

## MD40REM-H2CH

### Digital pressure gauge – Pressure from 0 to 40 bar

**Firmware  
Version 8.1**

#### According to the Regulations

**UNI 7129** Below 35 kW  
**UNI 11137** Automatic litre dispersion calculation  
**UNI 11137** Leak check for systems with a max of 18 dm<sup>3</sup>  
**UNI 11137** Valve leak check  
**D.M.12/04/96** Above 35kW 6° Type  
**D.M.12/04/96** Above 35kW 7° Type

## Main features

Instant measurement of pressures on the scales: **bar, mbar, mmH<sub>2</sub>O, Pa, hPa, PSI**  
Measures and performs all the **UNI 11137-UNI 7129-UNI 11147-UNI 10845-D.M.12/04/96** tests  
Measures a pressure up to 10 bar with external sensor  
Measures a pressure up to 25 bar with external sensor  
Measures a pressure up to 40 bar with external sensor  
Measures a pressure up to -1 to 45 bar with external sensor for FREON  
Measures constant automatic barometric pressure  
Records the pressure in the network  
Measures the volume of a gas system  
Measures the volume of a tank or container  
Measures the ambient temperature from -10°C to 50°C  
Measures the temperature from - 50°C to 500°C  
Easy to use  
Navigation buttons  
Facilitated data entry program  
Easy user data entry  
Facilitated entry of the date of the system being tested  
Menu Program  
Language selection: Italian, English, German.  
It stores the read data and then transmits it to a PC  
Data transmission program "**MD40REM-H2CH provider**" to be installed on PC  
Prints all the events  
Prints the GRAPH of the measured Pressure and Temperature  
1 USB port used for: battery charging and data transmission  
1 USB port used for: External pressure switch and/or 500°C thermometer and maintenance port  
IR transmission for portable printer  
4 row by 20 column backlit alpha numeric display  
Rechargeable NIMH batteries  
Long autonomy  
Microprocessor-controlled battery charger  
Possibility of working with mains voltage  
Equipped with a stand for use

## Summary of Topics

3. content control, warnings, information notes, program descriptions
4. for your safety, precautions
5. prior to start-up, components and controls
6. pneumatic connections, connection of accessories, battery chargers, alternative sources
7. power on and off, navigating the MENU
8. user data entry
9. date and time insertion
10. how to measure pressures
11. how to record a pressure
12. tests and measurements according to the UNI 7129 regulations
13. tests and measurements according to the UNI 11147 regulations
14. automatic volume tests according to the UNI 11137 regulations
16. manual volume tests according to the UNI 11137 regulations
18. max 25 dm<sup>3</sup> verification according to the UNI 11137 regulations
20. valve leak check according to the UNI 11137 regulations
22. mechanical seal according to the UNI 11137 regulations
24. flue pressure tightness test according to the UNI 10845 regulations
26. flue depression leak test according to the UNI 10845 regulations
28. connection and transfer to the computer, insurance and guarantees
30. conversion tables and pipe diameters
31. accessories

## Check the contents of the package

Check that the package contains all of the items listed below.

Battery charging and data transmission cable for USB port  
Silicone tube  
Chromed brass pipe for flue connection  
Spiral tube complete with fittings used for pneumatic connection  
UBS KEY with PC configuration software and pressure gauge instructions **MD40REM-H2CH**.  
Warranty certificate  
Calibration certificate  
Quick guide

## Important Warning

The digital pressure gauge **MD40REM-H2CH** leaves the factory accompanied by a test and calibration certificate. This corresponds to the calibration declared by the sample instrument, **based on international standard norms**.  
The evaluation of the measurement uncertainty is **"B category"**,

The ordinary and extraordinary maintenance of the digital pressure gauge and the **CALIBRATION**, whose natural expiry is **ONE YEAR**, must be performed by authorised personnel, using compliant equipment.

**Information note between Pressure and Temperature:** For each degree C. of temperature the pressure varies by approximately 1 mbar

To define a steady state of air, **three macroscopic variables** are required, each capable of direct measurement.  
These variables are **pressure**, **temperature** and **volume**; the state of an air gas of volume **V**, at pressure **P**, and at temperature **T** is then defined by Boyle's law:  
 $P \cdot V = n \cdot R \cdot T$ . Where **n** is the number of gram molecules constituting the gas and **R** is a universal constant.  
The possible states of a gas at constant pressure and volume are expressed by the Gay-Lussac laws: **at constant pressure the volume of a gas increases as the temperature increases, or vice-versa**.

Therefore connecting the instrument with **variable temperatures**, the instrument will undoubtedly record a final pressure that is different from the initial one.  
This is normal and is not the result of an instrument malfunction.

### IMPORTANT NOTE:

With the pressure gauge turned on without pressure it is evident that the numbers after the point do not remain still. This is not a calibration defect or uncertainty, but rather the advantage of the high precision of this instrument. It should be remembered that reading occurs at 18 bits.  
When the instrument is placed under pressure calibration takes place automatically.

## Description of the TEST programs

### TEST measurements

<b>UNI 7129</b>	Below 35 Kw	Leak Test
<b>D.M. 12/04/96</b>	Above 35 Kw 6° Type	Leak Test
<b>D.M. 12/04/96</b>	Above 35 Kw 7° Type	Leak Test
<b>UNI 11147</b>	Pressing system	Leak Test
<b>UNI 11137</b>	Automatic litre dispersion calculation	
<b>UNI 11137</b>	Manual litre dispersion calculation	
<b>UNI 11137</b>	Leak check for systems with a max of 25 dm <sup>3</sup>	
<b>UNI 11137</b>	Valve leak check	
<b>UNI 11137</b>	Mechanical seal	
<b>UNI 10845</b>	Flue seal test	
<b>UNI 10845</b>	Flue draft test	

### MULTI GENERIC TESTS

## For your safety

To prevent risks of damage to the product or injury to you and to third parties, before using the pressure gauge, carefully read the following safety warnings in their entirety. Keep them so that anyone who uses the appliance can consult them beforehand.

### **In the event of a malfunction, turn off the appliance immediately.**

If you detect smoke or an acrid or unusual smell coming from the appliance or from the mains adapter (accessory supplied): Immediately turn off the pressure gauge, disconnect the power supply from the mains, and send the equipment to the nearest assistance centre.

### **Use the instrument with caution in the presence of flammable gases.**

To avoid the risk of explosions or fires, always use the appliance under close supervision, without leaving it unattended.

### **Do not keep the bag strap wrapped around your neck.**

Be extremely careful, especially when equipping the instrument with a shoulder strap, and especially in the presence of young children.

### **Do not try to disassemble the appliance.**

Contact with internal components of the pressure gauge can cause injury. In case of faults, the product must be repaired exclusively by qualified personnel. If the appliance breaks following a fall or crushing, contact the Assistance Centre for the necessary repairs.

### **Observe the due precautions when handling the batteries.**

The batteries should never be exposed to high temperatures, i.e. above 60°C.

To ensure optimal shelf life, use the batteries at room temperature.

If used at low temperatures, the durability may decrease.

Do not disassemble the batteries and do not throw them into fire as they could explode.

Never dispose of batteries in normal waste. Follow the local regulations for disposal.

### **Use the appropriate cables supplied.**

In order to preserve the conformity of the product with the regulations, to connect to the input and/or output terminals of the pressure gauge, use only the cables supplied for this purpose or marketed separately by the manufacturer **BEINAT S.r.l.**

### **USB KEY.**

To avoid damage and to prevent possible risks, the USB stick containing the software programs and manuals relating to this product must not be reproduced and must be carefully stored.

### **Avoid contact with liquid crystals.**

If the monitor breaks, be careful not to injure yourself from glass fragments and avoid liquid crystals coming into contact with your skin, eyes or mouth.

## Precautions

To enjoy your **MD40REM-H2CH**, digital pressure gauge for a long time and with satisfaction, use and store it bearing in mind the following precautions.

### **Do not allow it to become wet.**

The pressure gauge is not waterproof. If immersed in water or exposed to high humidity levels, it could cause serious damage.

### **Avoid dropping it.**

Heavy impacts against hard surfaces and significant vibrations can damage the appliance.

### **Avoid high magnetic fields.**

This pressure gauge should not be used or stored in the presence of radiations or high magnetic fields. Static electricity or magnetic fields produced by equipment such as radio transmitters can interfere while data is being collected, can damage the data stored in memory or the internal circuits of the pressure gauge.

### **Avoid sudden changes in temperature.**

Sudden changes in temperature can cause condensation to form and the batteries may deliver less voltage. Above a certain temperature (approximately 45°C) the monitor turns black. To make it visible again, cool it by placing it in the refrigerator for a few minutes.

### **Cleaning**

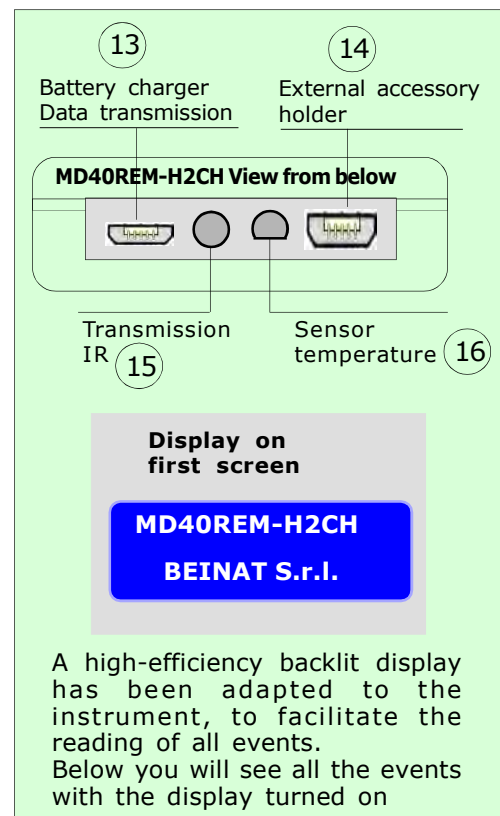

Never clean the appliance with chemical products. If necessary wash with a damp cloth.

## Before start-up

Thank you for choosing a **BEINAT S.r.l.** digital pressure gauge **MD40REM-H2CH**. This manual has been designed to help you obtain maximum functionality and automatic efficiency of the product. Read these instructions carefully before starting use and always keep it nearby when using the instrument. The illustrations and text on the screens in this manual may differ from what is actually displayed.

## Components and controls

- 1) ON button.** Holding it down for 3 seconds turns on the **MD40REM-H2CH**.
- 2) OFF button.** Holding it down for 3 seconds turns off the **MD40REM-H2CH**.
- 3) SELECT button.** Press it to select the scales relevant to the desired pressure measurement.  
**mbar, mmH<sub>2</sub>O, Pa, hPa, PSI.**
- 4) Test button.** It is used to enter the system verification menu according to the **UNI** regulations.
- 5) Recorder button.** Pressing this button activates a process of recording of the pressure present in the pipe.
- 6) Menu selection button.** Press this button to access the instrument settings.
- 7) Enter button.** It is used to confirm the data entered.
- 8) Print button.** Used to print the Ticket of the measurements taken.
- 9) Right navigation button.** Pressing this button moves the cursor to the RIGHT of the screen.
- 10) UP navigation button.** Pressing this button moves the cursor UP on the screen.
- 11) Left navigation button.** Pressing this button moves the cursor to the LEFT of the screen.
- 12) Dwn navigation button.** Pressing this button moves the cursor DOWN on the screen.
- 13) Battery charging and data transmission connection.** This USB connector is used to connect the instrument to the battery charger which can be performed via PC or 230V mains (see paragraph on page 6). Furthermore, from this USB port it is possible to transmit and receive data from the PC.
- 14) "External accessory USB port"** This connector is used to connect external accessories, including: pressure sensor and temperature sensor.
- 15) IR infra-red port.** It is used to transmit data to a printer.
- 16) Ambient temperature probe.** This probe detects the ambient temperature with a temperature from -10°C to 50°C.
- 17) Pneumatic connection for measuring mbar depression.**
- 18) Pneumatic connection for measuring mbar pressure.**

## Battery Notions and Recharging

02/05/13	10:10	
Pressione	INT	
Temperatura:	25 °C	

Charging via PC

Charging via 230V mains

### Technical data of the LITHIUM POLYMER battery

Nominal voltage of the **7.4V battery pack**, current **1050 mA**.

**Operating time 8 hours** approximately with batteries charged

**Battery charging time approximately 6 hours.**

**N.B. Do not recharge the battery in an ATEX area**

### Before turning on the pressure gauge

At the time of purchase, the battery is not fully charged.

Please charge for at least 6 hours.

### Loading with PC

Connect the battery charger connector to the micro USB socket located on the bottom of the instrument and then to the USB socket of any PC.

During charging, the battery level indicator (a graduated bar on the screen) will indicate the battery charge status.

### 230V mains voltage charging

Connect the battery charger connector to the micro USB socket located on the bottom of the instrument and then connect the battery charger to a power socket.

During charging, the battery level indicator (a graduated bar on the screen) will indicate the battery charge status.

### Use

The battery must never be exposed to temperatures above 40°C.

To ensure optimal shelf life, use the batteries at room temperature.

If used at both low and high temperatures the durability may decrease.

### Protection

For greater protection of the batteries and of the instrument, an additional control has been integrated.

When the batteries fall below a pre-set minimum limit, the following message lights up:

**"LOW VOLTAGE DETECT"**. The instrument remains blocked; **To reset, proceed as follows:**

Connect the **MD40REM-H2CH** to the mains voltage via the supplied power supply, or to the PC. Then the following text appears **"WAIT RESET SW..."**

Leave the **MD40REM-H2CH** to recharge for **at least 6 hours**.

### Note

When the pressure gauge must be used for a long time, the instrument can be powered with 230V mains voltage via external power supply.

## Pneumatic Connection

The **MD40REM-H2CH pressure gauge** has an input to measure a maximum pressure from **±1 bar**. The pressure connections are located on the head of the instrument, (see page 5). There are two inputs available, one with positive pressure and one with negative pressure.

The latter is used to measure a pressure difference between two measurements or to check the draft efficiency in flues.

### To measure pressure

Apply the supplied pipe to the dedicated inlet, being sure to leave the depression inlet open.

### To measure depression

Apply the supplied pipe to the dedicated inlet, being sure to leave the pressure inlet open.

### To measure the difference between two pressures.

Apply the higher pressure to the positive inlet and the other to the negative inlet.

The pressure difference that the instrument will measure between one inlet and another will appear on the display.

**N.B.** The higher pressure must always be connected to the positive input.

## Connection of optional accessories

**'External probes can be connected to the MD40REM-H2CH** via the port : **"External accessory USB port"**

4 types of pressure switches with scale at: **10 bar -25bar - 40bar - from -1 to 45 bar**

1 PT100 Temperature Probe from **-50°C to 500°**

To activate the function of these probes it is necessary to select the ports from the main menu

## Switching on and off

**POWER ON.** Turn on the pressure gauge by pressing the power button "**ON**" being sure to hold it down for 3 seconds: The window containing the instrument model, firmware version and serial number will be displayed.

After 5 seconds, the words "STABILISATION IN PROGRESS" will appear. Wait a few seconds, and the main window will open.

**SHUTDOWN.** To turn off the pressure gauge, press the "**OFF**" button, being sure to hold it down for 3 seconds

## Navigate through the Menu

Pressing this button activates the "**Menu**" program. From here it is possible to set the device for and to select the work mode of the pressure gauge.

To scroll the menu use the Up and Down buttons, to confirm press Enter

This program is used to enter the data of the operating company. Pressing the "**Enter**" button the tool will prompt to "Enter Password". You will find the password on the warranty card. Follow the instructions that are requested.

This function is used to configure the language to be used. press the "Down" or "UP" buttons to select the desired language; press "Enter" to confirm.

This function is used to configure the language to be used. Use the "Down" or "UP" buttons to select the desired language: **English, German.** Press "Enter" to confirm the selected language.

This program is used to insert the current date and time. Pressing the "**Enter**" button the tool will prompt to enter the date and time. Follow the instructions that are requested.

This program is used to select the type of pneumatic sensor to be used. Internal or External. Pressing the "Enter" button the instrument will ask for the "Sensor type". Press the "**Down**" button and/or the "**UP**" button. Select and press "**Enter**" to confirm the required sensor.

This program is used to activate the barometric sensor. Pressing the "**Enter**" button, the instrument will ask whether or not want to activate the barometric pressure control. Use the "**Down**" or "**UP**" buttons to activate or deactivate it. Press "**Enter**" to confirm. When activated, the text appears on the main screen.

This program is used to select the type of syringe available to perform the dispersion tests. Press the "**Enter**" button and the instrument will ask the following: the size of the syringe in millilitres (the equivalent in cc). To enter the numbers, press the appropriate keys (similar to when sending an SMS). To move forward/back, use the navigation keys; for white spaces use the key with the number 1.

## Next Navigate through the Menu

This program is used to read stored events. Pressing the "Enter" button the instrument will enable reading of all the tests performed up to a **maximum of 6 events**.

### Deletion from memories

- 1) Select the test to be deleted with the **Up/Down** button.
- 2) Confirm it with the **Right** button.
- 3) Press the **Menu** button;
- 4) With the **Up/Down** buttons select **yes/no** and press **Enter** to confirm.

Pressing the "Enter" button the instrument will finish the Menu routine and will return to the main screen

## Entering user data

In order for the instrument to respect the **Regulations** it is necessary to enter your personal data. Start the guided configuration which accompanies the user in entering personal data, such as: First name, surname or company data Street, post code, city, telephone, VAT number, etc. To do this, follow the instructions on the screen.

**Attention!** this operation can only be performed via PC.

Starting from the "Menu" button you will find the "Data Setting" program. Press "Enter" to enter the "Data Setting" program

To protect your personal data before accessing programming it is necessary to **enter the Password (\*\*\*)** Once inserted, press **Up/Down**. If you make a mistake, the tool exits the configuration.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To go forward/back use the navigation keys. For white spaces use the number key 1.

The program prompts to enter your **business name**. Remember that you have a total of 20 characters available.

Once inserted, press **Up/Down**.

To enter characters or numbering, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address** of the company name. Remember that you have a total of 20 characters available. Once entered, press **Up/Down**.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

## Next Data entry

The program prompts to enter the **Postcode the City and the Province** where your company name is located, remembering that you have a total of 20 characters available. Once inserted, press **Up/Down**. To enter characters, press the appropriate buttons (similar to when sending an SMS). To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the VAT number** of the company name. Remember that you have a total of 11 characters available. Once entered, press **Up/Down**. To enter characters, press the appropriate buttons (similar to when sending an SMS). To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter the **E-mail address** of the company name, remembering that you have a total of 20 characters available. Once entered, press **Up/Down**. To enter characters, press the appropriate buttons (similar to when sending an SMS). To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter the telephone number of the company name, remembering that you have a total of 20 characters available. Once entered, press **Up/Down**. To enter characters, press the appropriate buttons (similar to when sending an SMS). To move forward/back use the navigation keys. For white spaces use the key with the number 1.

You have now finished entering your personal data. To exit press **Enter**

## Date and time insertion

**Attention! This operation can be performed via PC.**

Starting from the "Menu" button  
Pressing the "Down" button you will find the program:  
"Date/Time Settings"

Pressing the "Enter" button you will find the insertion program

The program prompts to enter the "day, month, year" date and then the current time "Hour and Minutes". To move from one group of digits to another use the "Up or Down" navigation buttons. If during insertion the digits are the same, simply move with the "Right or Left" navigation button. To enter, press the appropriate numbers (as when sending an SMS). Once inserted, press **Down** to exit

## How to measure pressures and Direct reading of an eventless pressure

The instrument was designed to measure pressures of: air, water and gas.  
Depending on requirements and on the regulations, pressures can be measured with these types of scales:

**mbar - mmH<sub>2</sub>O - Pa - hPa - PSI.**

To select the scales press the **"Select "** button

### READING

- 1) Select the desired scale: **mbar - mmH<sub>2</sub>O - Pa - hPa - PSI.**
- 2) Connect the pipe to the desired inlet, positive or negative.
- 3) Connect the pipe to the source of pressure or depression to be measured.
- 4) Read the value directly.

**N.B.** These readings are not stored. To print the event press **Print**

## Recording of a gas pressure in the network.

The instrument has been designed to record gas pressures in the network. Select the scale in **mbar**. It is advisable to perform this test with this scale, as the network pressure is measured in **mbar**. **Recording procedure.**

- 1) Connect the pneumatic tube to the positive inlet of the **MD40REM-H2CH** and to the pressure source to be measured.
- 2) Turn on the printer and place it next to the **MD40REM-H2CH**.
- 3) **Press the "Recorder" button** . This begins the recording of the pressure present in the network. The instrument records every variation both up and down, within 10% and **prints the ticket**, stating the pressure recorded with the time of the event.

The program prompts to enter the **details of the user** in relation to which the test is performed. Remember that you have a total of 20 characters available.

To enter characters or numbering, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, if for civil use, heating, or industrial use; remember that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data. Press **ENTER** to finish and exit the program.

Press **Up/Down** to re-read the data entered. To modify any data use the navigation keys, and correct.

Press Enter to start the recording phase.

**Before pressing Enter** remember to place the printer online and to turn it on.

The **MD40REM-H2CH** gives the order to print the TICKET; the first printout includes the entire initial phase, and consequently: will print each variation, indicating the measurement and time.

See the Ticket to the side.

The recording process lasts for the desired time, however no longer than 24 hours

To end recording, press **"Enter"**

## Tests and Measurements according to the Regulations

UNI 7129

below 35kW

The UNI7129/01 Below 35kW standard requires that the installer must verify the tightness of the gas system at a pressure of **at least 100 mbar**, (1000mmH<sub>2</sub>O) for a **Stabilisation and Testing time of 15 minutes each**.

The **Stabilisation** test is performed. **15 minutes** of stabilization have elapsed, the reading is performed **Actual TEST**, for another 15 minutes.

No pressure loss must be detected between the initial pressure and the final pressure of the actual test. The test is positive if there is no pressure drop.

**N.B.** The two measurements, stabilisation and test, are performed automatically.

### ATTENTION !!

Before starting the leak test it is advisable to **connect the temperature probe**.

The probe must be kept away from heat and/or cooling sources.

**Warning.** The temperature does not affect the leak test but is for information purposes and for comparison with the pressure.

For each degree Celsius of temperature the pressure varies by approximately 1 mbar.

**Actions:** Turn on the instrument, select the pressure in **mbar** with the SELECT button, press the TEST button and follow the operations reported below.

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program prompts to enter **the pressure**. To achieve this, proceed as follows:

**1)** Connect the extended pipe connected to the positive inlet, which is located at the top of the instrument.

**2)** The scale is automatically set to mmH<sub>2</sub>O.

**3)** Connect the other end of the pipe to the pressure source to be measured.

**4)** Pressurised the pipe with a **minimum of 1000 mmH<sub>2</sub>O (100mbar)**.

Press **ENTER**.

**Next Tests and Measurements according to the Regulations**

**UNI 7129**

**below 35kW**

```
13/05/23 10:10 ■■■
Pi: 01000.1 mmH2O
Time: h 00.29.16

## Tests and Measurements according to the Regulations

**Ministerial Decree of 12/04/1996 6<sup>a</sup> type > 35kW for external pipes**

**6<sup>a</sup> type:** pipelines for maximum operating pressures above 0.04 up to 0.5 bar;

Measurement of the **tightness** of gas systems as required by D.M. 12/04/96, **above 35kW of 6<sup>a</sup> Type for external pipes.**

Italian Ministerial Decree 12/04/96 requires that the installer must check the seal of the gas system at a pressure of at least **1 bar**. The test is positive if there is no pressure drop.

The leak test for a gas system **6<sup>th</sup> Type** must be performed with a pressure of **at least 1 bar**, with a **pressure stabilisation time of 15 minutes, and the actual test of 4 hours.**

**N.B.** The two measurements, stabilisation and test, are performed automatically.

### ATTENTION !!

Before starting the leak test it is advisable to **connect the temperature probe.**

The probe must be kept away from heat and/or cooling sources.

**Warning.** The temperature does not affect the leak test but is for information purposes and for comparison with the pressure.

For each degree Celsius of temperature the pressure varies by approximately 1 mbar.

**Actions:** Turn on the instrument, select the pressure in **mbar** with the SELECT button, press the TEST button and follow the operations reported below.

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program asks if the gas pipe is underground or external To respond:

Press **Up/Down** to select "YES" or "NO"

Once the desired data has been selected, Press **ENTER**

**Next Tests and Measurements according to the Regulations**

**Ministerial Decree of 12/04/1996 6<sup>a</sup> type > 35kW

## Tests and Measurements according to the Regulations

Ministerial Decree of 12/04/1996 7<sup>a</sup> type > 35kW  
for underground pipes

7<sup>a</sup> type; pipelines for  
maximum operating  
pressures up to 0.04 bar;

Measurement of the **tightness** of gas systems as required by UNI7129/01, **above 35kW of 7<sup>a</sup> Type for underground pipes.**

Italian Ministerial Decree 12/04/96 requires that the installer must check the seal of the gas system at a pressure of at least **1 bar**. The test is positive if there is no pressure drop.

The leak test for a **7<sup>a</sup> Type** gas system must be performed with a pressure of **at least 1 bar**, with a pressure stabilization time **of 15 minutes, and the actual test of 30 minutes**. If some sections of pipe are not visible, the test must be performed before covering.

**N.B.** The two measurements, stabilisation and test, are performed automatically.

### ATTENTION !!

Before starting the leak test it is advisable to **connect the temperature probe**.

The probe must be kept away from heat and/or cooling sources.

**Warning.** The temperature does not affect the leak test but is for information purposes and for comparison with the pressure.

For each degree Celsius of temperature the pressure varies by approximately 1 mbar.

**Actions:** Turn on the instrument, select the pressure in **mbar** with the SELECT button, press the TEST button and follow the operations reported below.

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program asks if the gas pipe is underground or external To respond:

Press **Up/Down** to select "YES" or "NO"

Once the desired data has been selected, Press **ENTER**

press Enter
```

The program prompts to enter **the pressure**. To achieve this, proceed as follows:

- 1) Connect the extended pipe connected to the positive inlet, which is located at the top of the instrument.
- 2) The scale is automatically selected at mbar.
- 3) Connect the other end of the pipe to the pressure source to be measured.
- 4) Pressurise the pipe with a **minimum of 1000 mbar, (1 bar)**  
Press **ENTER**.

```
13/05/23 10:10 --■
Pi: 00000.1 mbar
Time: h 00.14.46
Pf: 00000.1 mbar
press Enter
```

#### STABILISATION TEST

Now the instrument automatically starts the stabilisation control. On the display you will notice that the **Time** starts the countdown;  
The test lasts 15 minutes.

```
13/05/23 10:10 --■
Pi: 00000.1 mbar
Time: h 00.29.59
Pf: 00000.1 mbar
press Enter
```

#### LEAK TEST; pressure 1000mbar

Now the instrument automatically starts checking the actual tightness on the display. You will notice that the **Time** starts the countdown. **The test lasts 30 minutes.**

**When performing this test, remember to connect the instruments to the electrical mains**

```
MD test 12/04/1996
Seal
13/05/23 09:03
Up/Down Enter
press Up/Down-Ent▲▼
```

At this point the **MD40REM-H2CH** enables reading of all the data detected by the test

To navigate, press the **Up/Down** buttons, to exit press **ENTER**

```
Confirm Save
Event in Memory
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
```

The tool prompts whether to store the detected data.

To do this, select **Yes/No** by pressing **Up/Down**.  
Press **ENTER** to confirm.

If saving is not confirmed within 30 seconds, the **MD40REM-H2CH** stores the event regardless.

```
Print Ticket?
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
```

The instrument prompts whether to print the ticket proving the test.

Select **Yes/No** pressing the **Up/Down** buttons.

Select **"Yes"**, turn on the printer and place it in line with the pressure gauge transmitter;  
Press **ENTER**.

```
Print Graph?
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
```

To print the test graph.

To select **Yes No** press the **Up/Down** buttons. Press **ENTER**.

#### Warning!

If the test is stored, the graph can also be printed from a PC at high resolution

```
Keep the Prev. data
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
```

When performing several tests **"TEST"** or to repeat a test. The instrument keeps in memory the data of the building where the test is being performed. The latter are only lost if the instrument is turned off.

## Next Tests and Measurements according to the Regulations

UNI 11147

on Pressing

The UNI 11147 **Pressing systems** standard requires that the installer must check the tightness of the gas system at a pressure of **at least 5000 mbar,r, (5 bar)** for a **Stabilization and Testing time of 15 minutes** each.

The **Stabilisation** test is performed. **15 minutes** of stabilization have elapsed, the reading is performed **Actual TEST**, for another 15 minutes.

No pressure loss must be detected between the initial pressure and the final pressure of the actual test. The test is positive if there is no pressure drop.

**N.B.** The two measurements, stabilisation and test, are performed automatically.

### ATTENTION !!

Before starting the leak test it is advisable to **connect the temperature probe**.

The probe must be kept away from heat and/or cooling sources.

**Warning.** The temperature does not affect the leak test but is for information purposes and for comparison with the pressure.

For each degree Celsius of temperature the pressure varies by approximately 1 mbar.

**Actions:** Turn on the instrument, select the pressure in **mbar** with the SELECT button, press the TEST button and follow the operations reported below.

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program asks which type of sensor should be used: 10/25/40 bar Choose by pressing-/Down and Press **ENTER** to confirm

**Attention!** this test cannot be performed with an internal sensor.

Performs external sensor stabilization

## Tests and Measurements according to the Regulations

### UNI 11137 Automatic volume test

Verification of the sealing requirements, with an indirect method, as required by the standard **UNI 11137**

The test of **dispersions** in gas conduction systems consists of searching for any leaks by detecting the pressure drop over time.

Any pressure drop measured is related to the volume of the internal system and translated into the flow rate of dispersed gas.

**Before** performing the test with gas, open doors and/or windows to ensure air exchange and close all valves, making sure there are no leaks unrelated to the test.

**Before** performing this test, remember to have selected the size of the syringe based on the size of the system, moving from the main menu. **Otherwise measurement will be incorrect** see table on p. 44

**Actions:** Turn on the instrument, select the pressure in **hPa** with the **SELECT** button, press the **TEST** and **Down** buttons and follow the operations reported below

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program asks what type of gas the test should be used with:

Natural Gas and/or LPG Gas, or Air.

To select the type of gas press the **Up/Down** keys and once the gas has been selected press **ENTER**.

## Next Tests and Measurements according to the Regulations

### UNI 11137 Automatic volume test

```
13/05/23 10:10 ■■■
Pi: -00000.1 hPa
Load Pressure
With aspirated syringe
press Enter
```

The program prompts to enter **the pressure**, . To do this, proceed as follows:

- 1) Connect the extendible pipe, connected to the appropriate inlet, located in the upper part of the instrument.
- 2) Connect the syringe and be sure to: **select the correct size** (see page 44) from the **Menu** program and to position it **with the plunger open**.
- 3) Connect the other end of the pipe to the pressure source to be measured.
- 4) Pressurise the pipe with mains gas **which must not be higher** than:
  - approximately 22 hPa** for natural gas (methane),
  - approximately 30 hPa** for LPG gas,
  - approximately 50 hPa** for air
 Press **ENTER**.

```
13/05/23 10:10 ■■■
Pi: 00000.1 hPa
Time: h 00.00.60
Pf: 00000.0 hPa
press Enter
```

## Tests and Measurements according to the Regulations

### UNI 11137 Volume manual test

Measurement of dispersions in domestic gas systems suitable for all systems with the indirect method, as required by the Standard UNI 11137 of art. 6.4

The test procedure must be performed with the natural pressure of the gas in the network which must not be higher than **approximately 22 hPa** for natural gas, **approximately 30 hPa** for LPG gas, or as required by UNI 11137 by pumping air into the pipes at a maximum pressure of 50 hPa.

**Before** performing the test with gas, open doors and/or windows to ensure air exchange and close all valves, making sure there are no leaks unrelated to the test.

**Actions:** Turn on the instrument, select with the **SELECT** button the pressure in **hPa**, press the **TEST** button once and **2** times **Down** and follow the operations below

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program asks what type of gas the test should be used with:

Natural Gas and/or LPG Gas, or Air.

To select the type of gas press the **Up/Down** keys and once the gas has been selected press **ENTER**.

You are asked to enter the diameter and length measurements to calculate the volume.

Enter the **radius** (see table on page 44), press **Up/Down**, enter the **length** expressed in metres, press **Up/Down**

The MD40REM-H2CH asks for this operation **three times**. This is because different systems are made with different sizes. If the pipe is built with a single diameter, enter the dimension only once or twice. Press **ENTER**.

## Next Tests and Measurements according to the Regulations

## Tests and Measurements according to the Regulations

UNI 11137

Check max 18 dm<sup>3</sup>

Measurement of dispersions in domestic gas systems suitable for all systems with the indirect method, as required by the Standard UNI 11137 of art. 6.2.2

The test procedure must be performed with the natural pressure of the gas in the network at a maximum pressure of: **approximately 22 hPa** for natural gas (methane), **approximately 30 hPa** for LPG gas.

**Before** performing the test with gas, open doors and/or windows to ensure air exchange and close all valves, making sure there are no leaks unrelated to the test.

**Actions:** Turn on the instrument, select with the **SELECT** button the pressure in **Pa**, press the **TEST** button once and **2** times **Down** and follow the operations below

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

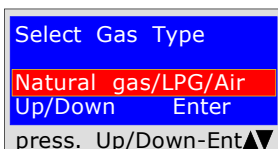

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program asks what type of gas the test should be used with:

Natural Gas (methane) and/or Town Gas (LPG).

To select the type of gas press the **Up/Down** keys and once the gas has been selected press **ENTER**.

The program prompts to enter **the pressure**. To do this, proceed as follows:

**1)** Connect the extendible pipe, connected to the appropriate inlet, located in the upper part of the instrument.

**2)** Connect the other end of the pipe to the pressure source to be measured.

**3) WITH NATURAL GAS** Pressurise the pipe with mains gas **2200 Pa approx.** Press **ENTER**.

**4) WITH LPG,** Pressurise the pipe with mains gas at **3000 Pa approx.** Press **ENTER**.

**Next Tests and Measurements according to the Regulations**

**UNI 11137**

**Check max 18 dm<sup>3</sup>**

```
13/05/23 10:10 --■
Pi: -00000.1 Pa

## Tests and Measurements according to the Regulations

UNI 11137

Seal Test

Leak check of the meter valve, as required by the Standard UNI 11137 art. 6.2.3

The test procedure is performed directly in the gas mains pipe to check the tightness of the meter valve.

**Before** performing the gas test, open doors and/or windows to ensure air exchange.

**Actions:** Turn on the instrument, select with the **SELECT** button the pressure in **mmH<sub>2</sub>O**, press the **TEST** button once and **4** times **Down** and follow the operations below

The instrument prompts whether to perform this test, press **ENTER**

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program prompts to discharge **the pressure**. To do this, proceed as follows:

- 1) lose the gas meter valve.
- 2) Discharge the gas pressure to the outside.
- 3) Connect the extendible pipe connected to the appropriate inlet, which is located in the upper part of the instrument.
- 4) Connect the other end of the pipe to the pressure source to be measured. Press **ENTER**.

## Next Tests and Measurements according to the Regulations

UNI 11137

## Multi-test

This program requires the expert installer, under their complete responsibility, to check the tightness of the system with a variable pressure, at their discretion, from **10 millibars** to **45 bar**, for the **Stabilization and Testing test decided by the same**.

Leak Test: **Set the** Stabilization Time; once the set stabilization time has elapsed, the **MD40REM-H2CH** performs the reading of the **Actual TEST**, for the time set.

No pressure loss must be detected between the initial pressure and the final pressure of the actual test. The test is positive if there is no pressure drop.

**N.B.** The two stabilization and test measurements are performed automatically.

**Warning:** The temperature does not affect the leak test but is for information purposes and for comparison with the pressure.

**Actions:** Turn on the instrument, select the pressure with the SELECT button in **mbar**. Press the TEST button and follow the operations below

The instrument prompts whether to perform this test, press ENTER

The program prompts to enter **the location of the system** where the test is being performed. Remember that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the type of system**, whether for civil use, heating, industrial use, or anything else, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the address of the building** in which the test is being performed, remembering that you have a total of 20 characters available. To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts to enter **the post code, the city and the province** of the **building** in which the test is being performed, remembering that you have a total of 20 characters available.

To enter characters, press the appropriate buttons (similar to when sending an SMS).

To move forward/back use the navigation keys. For white spaces use the key with the number 1.

The program prompts whether to finish entering the data.

Press **Up/Down** to re-read the data entered.

To modify any data use the navigation keys, and correct.

Press **ENTER** to finish and exit the program.

The program prompts to enter the name of the Standard to be executed.

The text "UNI" appears (this word can be overwritten) and, subsequently, it is possible to enter the number of the standard.

Press **Up/Down**, to exit. The text typed in remains in memory.

The program prompts to select the type of sensor. The sensor must be selected depending on the type of pressure to be measured.

Press **Up/Down** to view the sensor type

Press **ENTER** to confirm and finish the selection.

## Next Multi-test

```

Stab. Time (hh.mm)

Load Pressure
press Enter
    
```

The program asks to load **the pressure**. To do this, proceed as follows:

- 1) Connect the pressure switch to the pipe of the pressure source to be measured.
- 2) Connect the external pressure switch into the appropriate input.
- 3) Select the mbar scale, or the desired scale.
- 4) Pressurise the pipe. Press **ENTER**.

```

13/05/23 10:10 --■
Pi: 00000.0 mbar
Time: h 00.00.06
Pf: 00000.0 mbar
press Enter
    
```

### STABILISATION TEST

Now the instrument automatically starts the stabilization control on the display. You will notice that the **Time** starts the countdown.

```

13/05/23 10:10 --■
Pi: 00000.0 mbar
Time: h 00.00.06
Pf: 00000.0 mbar
press Enter
    
```

### SEAL TEST

Now the instrument automatically starts checking the actual tightness on the display. You will notice that the **Time** starts the countdown;

**The test lasts the set time**

```

Test Uni *****
.....
13/05/23 09:03
Up/Down Enter
press Up/Down-Ent▲▼
    
```

At this point it enables reading of all the data detected by the test

To navigate, press the **Up/Down** buttons, to exit press **ENTER**.

```

Confirm Save
Event in Memory
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
    
```

Store the collected data?

To do this, select **Yes/No** by pressing **Up/Down**. Press **ENTER** to confirm.

If saving is not confirmed within 30 seconds, the **MD40REM-H2CH** stores the event regardless.

```

Print Ticket?
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
    
```

The instrument prompts whether to print the ticket proving the test.

Select **Yes/No** pressing the **Up/Down** buttons.

Select **"Yes"**, turn on the printer and place it in line with the pressure gauge transmitter; press **ENTER**.

```

Print Graph?
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
    
```

Print the test graph?

To select **Yes / No** press the **Up/Down** buttons. Press **ENTER**.

**Warning!**

If the test is stored, the graph can also be printed from a PC at high resolution

```

Keep the Prev. data
No/Yes
Up/Down Enter
press Up/Down-Ent▲▼
    
```

When performing several tests **"TEST"** or to repeat a test.

The instrument keeps in memory the data of the building where the test is being performed. The latter are only lost if the instrument is turned off.

## Example of graph

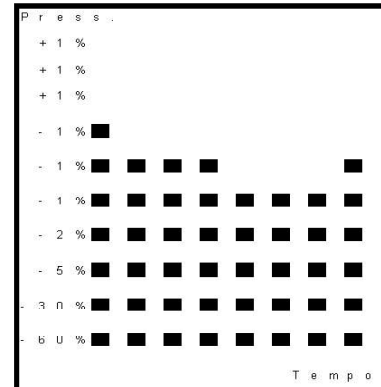

### Graph detected and printed directly

The Graph is only printed if requested; to do this follow the instructions described.

To select **Yes No** press the **Up/Down** buttons.

Selecting **Yes**, turn on the printer and place it online. Press **ENTER**.

This graph, at low resolution, is obtained directly from the portable printer at the end of the tests

## Examples of

### Graphs detected and printed from PC

These Graphs can only be obtained via the PC, in **PDF formatf**.

To do this it is necessary to save in the memory (6 TESTS can be saved) of the **MD40REM-H2CH** the test performed.

**N.B.**The graph is high resolution and exportable in the same format.

Confirmation of storage of the detected tests.

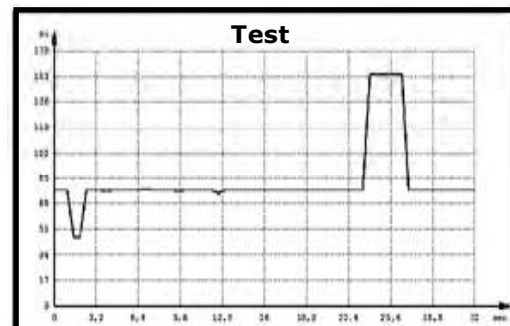

To select **Yes No** press the **Up/Down** buttons.

Press **ENTER** to confirm.

**UNI 7129 test < at 35kW**

**UNI Test 10845 Flue draft**

**Temperature Test**

## Connection to Personal Computer

The digital pressure gauge **MD40REM-H2CH** can be connected to a Personal Computer via the appropriate USB port.

**Why connect it to a Personal Computer?** For various and useful reasons including:

1. To configure or modify the data of the company that must perform the tests.
2. To configure or change the date and time,
3. To configure the temperature probe
4. To configure the pressure sensors, whether internal or external
5. To receive the data collected from the various systems examined and to create an imaginative and useful database of all customers, thus maintaining useful and easy-to-consult records for several years.

### Configuration

A USB stick containing the program to be installed on your Personal Computer is delivered together with the pressure gauge. The program "**MD40REM provider**"

To use the **MD40REM-H2CH Provider** your computer must be compatible with one of the following Windows operating systems:

- \* Windows 98
- \* Windows 2000 professional
- \* windows XP Professional and/or Home Edition

### Minimum requirements

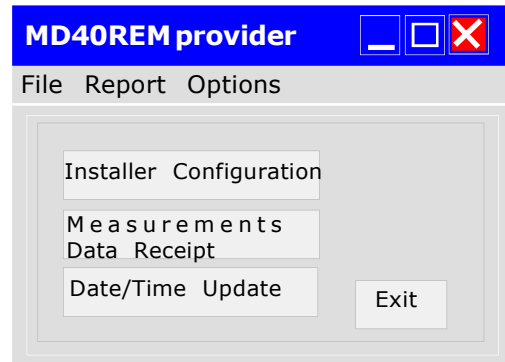

PC with CPU Intel Pentium or Centrino or ADM Athlon  
Memory : min. 64 MB RAM or greater  
SVGA Monitor with 640X480 resolution

### Installing the program

Insert the USB stick into the PC, press "**SETUP.EXE**"

The program begins installing, follow the installation according to the prompts that appear.

At the end you will also find the program link in the Start start-up programs.

## Insurance

**INSURANCE.** The equipment is protected by SOCIETA' REALE MUTUA for liability insurance PRODUCTS for a maximum value of 1,500.000 Euro against the damage that this equipment could cause in the event of non-functioning.

## Warranty

**WARRANTY.** The equipment is guaranteed for a period of 3 years from the date of manufacture, subject to the conditions described below. Components recognised as defective will be replaced free of charge, **excluding** plastic or aluminium cases, bags, packaging, any batteries, and technical data sheets.

The equipment must arrive carriage paid at the company **BEINAT S.r.l.**

The warranty excludes faults due to tampering by unauthorised personnel, as well as incorrect installations or negligence resulting from phenomena unrelated to the normal functioning of the appliance.

The company **BEINAT S.R.I.** is not liable for any damage, direct or indirect, caused to persons, animals or property by product failures or by the forced suspension of its use.

## Technical features

1st power supply .....	8.4 V.dc via built-in batteries
2nd power supply .....	230 V.ac with appropriate power supply
Type of batteries .....	NIMH
Consumption .....	40mA
Battery autonomy .....	approximately 10 hours
Battery charger .....	via the USB port of a PC, or with an appropriate power supply
Charging control .....	controlled by microprocessor
Charging time with depleted batteries .....	Approximately 8 hours
Battery charging/discharging control .....	shown on the display
Alpha numeric display .....	4 lines for 20 characters
Event Storage .....	Ten
PC connection .....	USB port
Non-condensate work humidity .....	from 0 to 90%
Printing .....	Via IR port
Electromagnetic compatibility .....	EC
Dimensions and weight .....	105*210*40mm - approximately 0.4kg.

### Pressures: from 100 Pa to 1 bar

Pressure detection probe.....	Incorporated
Measuring range .....	/- 1bar (~10.000 mmH <sub>2</sub> O)
Pressure overload .....	0.4bar
Maximum seal pressure .....	/- 1.4bar (~14,000 mmH <sub>2</sub> O)
Resolution .....	0.1 mbar
Precision.....	+/- 10mbar

### Pressures: from 50 Pa to 100 Pa

Pressure detection probe.....	Incorporated
Measuring range .....	/- 100 Pa
Resolution .....	0.1 Pa
Precision.....	/- 3 Pa

### Pressures: from 0 Pa to 50 Pa

Pressure detection probe.....	Incorporated
Measuring range .....	/- 50 Pa
Resolution .....	0.1 Pa
Precision.....	/- 0.5 Pa

### Pressures: greater than 1 bar

Adaptable outdoor sensors .....	from 10/25/40/45 bar
Precision .....	/- 1% FS

### Temperature:

Temperature detection probe .....	Built-in -10°C to 50°C
External temperature probe .....	from - 50°C to 500°C
Operating temperature .....	0°C ÷ 50°C

### Readings and Measurements

These operations must be performed respecting the method and manner illustrated in this booklet.

#### ATTENTION!

All measurements performed with **depleted batteries**, 1/2 notches, **distort the measurement**.

## MD40REM Calibration Instruments and Precision

Measurement Type	Instrument Used	Serial Number	Measurement Range	Uncertainty	Resolution
Pressure 4 bar	DRUCK DPI5030	0745/99-09	0 ÷ 4 bar (0 ÷ 400000 Pa)	± 0.1% F.S	1 mbar 100Pa

125	5"	139,7	130,7	65,35
150	6"	168,3	159,3	79,65
200	8"	219,1	207,9	103,95
250	10"	273,0	260,4	130,2

Diameter of some copper pipes		
mm.external	mm. internal	mm radius
6X1	5	2,5
8X1	7	3,5
10X1	9	4,5
12X1	11	5,5
14X1	13	6,5
15X1	14	7
16X1	15	7,5
18X1	17	8,5
22X1	21	10,5
28X1	27	13,5
35X1,5	33,5	16,75
42X1,5	40,5	20,25
54X1,5	52,5	26,25

Examples of pipe volumes		
Diameter (inches)	Diameter (mm)	Litres contained in each meter of pipe
3/4"	21,7	0,37
1"	28,5	0,64
1" e 1/4	36,6	1,05
1" e 1/2	43,5	1,49
2	53,9	2,28
2 e 1/2	69,7	3,82

Syringe selection (ml)	Volume to be measured (l)
50 ml	up to 10 litres
100 ml	from 10 to 50 litres
200 ml	from 50 to 100 litres

Approximately 2ml per litre over 100 litres

### Remote pressure switch

**PHU10** pressure switch range 0-10 bar

**PHU25** pressure switch range 0-25 bar

**PHU40** pressure switch range 0-40 bar

**PHU45** pressure switch range -2-45 bar dedicated for the "Freon" refrigerant gas

### Temperature Probe in PT100

**ST100** temperature probe with extendible cable Range - 50 400°C

### Portable thermal printer

To complete this instrument for instrumental testing, and for the issuing of the declaration of conformity, **BEINAT S.r.l.** has adopted this type of thermal printer, as its innovative solution compared to systems that use an impact method.

The elegance, size and weight, combined with the flexibility of use, make this printer a useful work tool.

### Description of the printer

The printer consists of an ABS body equipped with a cover through which it is possible to access the paper roll and the printing mechanism.

The multifunction button, the red LED and the IR transmission are housed on the front

### Paper replacement

To change the paper roll proceed as follows:

Open the printer cover and position the roll of paper, respecting the direction of rotation of the paper as indicated in the figure below

**INSURANCE.** The equipment is protected by SOCIETA' REALE MUTUA for liability insurance PRODUCTS for a maximum value of 1,500.000 Euro against the damage that this equipment could cause in the event of non-functioning.

**WARRANTY.** The equipment is guaranteed for a period of 3 years from the date of manufacture, subject to the conditions described below.

Components recognised as defective will be replaced free of charge, **excluding** plastic or aluminium cases, bags, packaging, any batteries, and technical data sheets.

The equipment must arrive carriage paid at the company **BEINAT S.r.l.**

The warranty excludes faults due to tampering by unauthorised personnel, as well as incorrect installations or negligence resulting from phenomena unrelated to the normal functioning of the appliance.

The company **BEINAT S.r.l.** is not liable for any damage, direct or indirect, caused to persons, animals or property by product failures or by the forced suspension of its use.

**"END OF LIFE" DISPOSAL OF ELECTRICAL AND ELECTRONIC APPLIANCES**

The dustbin symbol on the product or on its packaging indicates that this product cannot be treated as household waste. Instead, it must be taken to a specific collection point for the recycling of electrical and electronic equipment, such as:

- points of sale, when purchasing a new product similar to the one to be disposed of;
- local collection points (waste collection centres, local recycling centres, etc.).

By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and for human health, which could be caused by inappropriate waste disposal of this product.

Recycling materials will help conserve natural resources. For more detailed information regarding the recycling of this product, please contact your local office, your household waste disposal service or the store where you purchased this product.

**Attention:** in some countries of the European Union the product does not fall within the scope of application of the national law transposing the European Directive 2002/96/EC, and therefore there is no obligation for separate collection at the "end of life" in force in them.
